

## Yamaha 2014-2015 YZ 250/450 Radiator Guards installation instructions

1. Remove side shrouds.
2. Remove stock louvers. Remove stock bolts from radiators.
3. Install radiator guards on radiators. Use stock bolts for inside mounting. Use provided M6x16 BHCS for center outside hole to hold guard in place on radiator (shown in picture). Start both inside and outside bolts, than tighten all three bolts. Make sure the upper and lower threaded holes align with mounting in radiator as these will be used for shroud mounting.

4. Re-install your radiator shrouds using provided M6x20 hex bolts and your install is complete.
